

unittest.TestCase

```
classDiagram
    class unittest_TestCase["unittest.TestCase"]
    class test_workshop_TestWorkshop["test_workshop.TestWorkshop"]
    test_workshop_TestWorkshop --|> unittest_TestCase
```

The diagram shows a class hierarchy. At the top is a box for 'unittest.TestCase' with two empty compartments below the name. Below it is a larger box for 'test_workshop.TestWorkshop' with a list of attributes and methods. A blue arrow with an open triangle head points from the 'test_workshop.TestWorkshop' box up to the 'unittest.TestCase' box, indicating that 'test_workshop.TestWorkshop' inherits from 'unittest.TestCase'.
