

workshop.hammer.HammerInstrumentor.  
\_attach\_function\_hook

```
graph LR; A[workshop.hammer.HammerInstrumentor._attach_function_hook] --> B[workshop.hammer._sanitize_js_string]; A --> C[workshop.hammer._validate_identifier];
```

The diagram illustrates a function hooking mechanism. A central box on the left, representing the hook function `workshop.hammer.HammerInstrumentor._attach_function_hook`, has two blue arrows pointing to the right. Each arrow points to a separate box representing a target function. The top target function is `workshop.hammer._sanitize_js_string`, and the bottom target function is `workshop.hammer._validate_identifier`.
